NO MONTHLY FEES REQUIRED

GPS SECURITY AND MONITORING SYSTEM FOR CARS

GPS locator ETLOC-30 is an advanced security and monitoring system designed for cars and its use is very easy and effective. The communication with the GPS locator installed in the car is done directly via SMS's. The car owner monitors his car by himself through his mobile phone.

This solution offers two principal advantages. The first advantage is that there are no monthly fees paid to the assistance centre for monitoring the car. The user pay only to the GSM provider for the price of sent SMS. Another essential advantage is the protection of privacy, no one else can monitor the car position except of the car owner.

In case the car is stolen or attacked the owner of the car will immediately receive an alarm SMS containing the speed and position of the car. The map with the car position will be displayed directly on the mobile phone display after clicking on the link in the received SMS. In case the used mobile phone does not support internet services it is possible to view the car position on internet through a special website satmaps.net.

The car owner can also request the current position of his car at anytime by sending an SMS command from his mobile phone.

Immediate and accurate positioning helps to quickly get back the stolen car. GPS locator ETLOC-30 works in the whole world, wherever is available GSM network.

MAIN FEATURES OF GPS LOCATOR ETLOC-30:

- » direct communication with GPS locator via SMS
- » localization of the car without any monthly fees
- » possibility to display the vehicle current position on the map directly on your mobile phone display without fees
